## DETAILED ACTION

### *Election/Restrictions*

1. Claims 30, 32-36 and 38-40 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 50, 52-53, and 55-58 are directed to the process of making or using an allowable product, previously withdrawn from consideration as a result of a restriction requirement, Claims 50, 52-53, and 55-58 are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on May 29, 2007 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

### *Allowable Subject Matter*

2. Claims 30, 32-36, 38-42, 44-50, 52-53, 55-58 and 60 are allowed.
3. Regarding Claims 30 and 50, the closest prior art, **Maus (US Patent No. 7,179,429)** discloses the claimed multilayer mat and process of forming the multilayer

mat including an intumescent layer in a first trough in which the first trough is made of a portion of the major surface of mat 6, portions of the other major surface of mat 5 and the end of mat 6 that contacts edge 9 of mat 5. However, based on the definition of "trough" on page 5, lines 17-18 of the invention specification, trough refers to a layer or mat with a non-flat surface in which a portion of the surface is **depressed compared to adjoining portions of the surface**.

4. Claims 32-36 and 38-40, 50, 52-53, and 55-58 directly or indirectly depend on Claim 30.

Regarding Claim 41, **Maus (US Patent No. 7,179,429)** reference discloses the claimed pollution control device. However, Maus does not teach that the multilayer mounting mat has a major surface of the multilayer mat in contact with the internal major surface of the housing being the major surface of one of the first or second non-intumescent layer because Maus teaches that a number of compensating layers 4 and/or additional plies of the thermally insulating layer 6 follow one another radially, can be provided to improve thermal insulation. Thus, major surface in contact with the internal major surface of the housing is the major surface of the intumescent layer.

Claims 42, 44-48 directly or indirectly depend on Claim 41.

5. Regarding Claim 60, **Maus (US Patent No. 7,179,429)** reference discloses the claimed pollution control device including an intumescent layer in a first trough in which the first trough is made of a portion of the major surface of mat 6, portions of the other major surface of mat 5 and the end of mat 6 that contacts edge 9 of mat 5. However, based on the definition of "trough" on page 5, lines 17-18 of the invention specification,

trough refers to a layer or mat with a non-flat surface in which a portion of the surface is **depressed** compared to adjoining portions of the surface.

Furthermore, the second trough of said second non intumescent layer of Maus does not face said intumescent layer because Maus teaches that a number of compensating layers 4 and/or additional **plies** of the thermally insulating layer 6 follow one another **radially (Column 5, Lines 14-17 – i.e. the mat lay-out can be either 6/8/5/6/8/5 or 6/8/5 with the intumescent layer (5) positioned inside inner region (8))**; thus, said intumescent layer is not positioned in the first and second trough.
